

Aurora presents the revolutionary new quiver Shark. It is not a simple restyling of something already seen on the market but a completely new concept of quivers that starts from an exclusive design and is completed with a series of details never seen on a target quiver.

The Proline Shark Quiver is simply the new touchstone for the target quivers. Available for right or left hand shooters in four different color combinations it sports the following main features

- √ Large pocket on the main quiver body, with two internal pockets, one with a zip.
- √ Three pockets shaped like a shark's gills, one of which hides a pen holder.
- √ Three separated pockets on the upper part.
- √ Pocket for the bow square on the back.
- √ Removable arrow divider.
- √ Cover band that can be personalized.
- √ Two flaps where the backnumber can be attached.
- √ Four separated sections for the arrows
- √ Belt that is kept in shape by a plastic inner layer, adjustable with velcro straps;
- √ Accessory holder metal clip.

You can find a wide range of quivers, but only Aurora offers you so much in a single product.
