

All the PROLINE HD, PROLINE and TECHNO cases of the new AURORA 2009 line are preset to be used with the new registered back carrying system.

This new system is attached, with the use of 4 metal rings and 4 metal karabiners, to any of the new cases. The advantages of this system are mainly:

- √ You can convert your traditional back carrying system to an unconventional shoulder/wheels one. This allows you to carry the case laying its weight partly on your shoulder but mainly on the wheels, and your hands are free.
- √ The straps can be easily attached and removed from the case, so you can store them in the case while it lays on the ground. This prevents them from getting dirty.
